

MAXIM[®]

CARBrid Carbon Build-Up Remover

Features:

Ready-To-Use Gel

Dissolves Baked-On Carbon Build-Up

Aluminium Safe

Description

A powerful formula that quickly dissolves baked-on carbon build-up from a wide variety of metal surfaces.

Directions

DO NOT ALLOW TO FREEZE.

NOT FOR USE ON: Painted surfaces, plastics, acrylics, Corian[®] sinks and countertops, Anolon[®] surfaces, Calphalon[®] or Teflon[™] non-stick pans. Not intended for use as a general-purpose cleaner / degreaser.

- 1 Wear Personal Protective Equipment when using this product.
- 2 Make sure surfaces are cool and dry before use.
- 3 Pour a small amount of product into a bucket or other container, then use a brush or sponge to apply a thick coat onto surface.
- 4 Let work for at least 15 minutes, or, for the toughest soils, overnight. Product will not harm metal surfaces, even with prolonged contact.
- 5 Test surface with a toothpick or other disposable, non-metal object to see if carbon comes off easily. If not, let sit longer. If so, wash with cold water using a bristle brush or soft pad. **DO NOT SCRUB.**
- 6 When using to clean the insides of appliances, wash thoroughly with soap and warm water, and rinse with plenty of potable water.
- 7 Avoid splashes and splatters.

Applications

Carbon remover for:

- > Pots and pans
- > Other metal dishware & utensils
- > Appliance interiors
